HEMATOLOGY

ADANI WILMAR HEALTH CHECKUP - BELOW 35 YEARS - MALE
COMPLETE BLOOD COUNT (WITH ESR)

<u>Test</u>	<u>Result</u>	<u>Units</u>	<u>Normal Range</u>	
COMPLETE BLOOD COUNT (WITH ESR)				
RBC PARAMETERS				
HEMOGLOBIN	11.90	gm%	13.5	- 17.5
R.B.C. Count	4.64	Mill/c.mm	4.7	- 6
HCT	40.10	%	42	- 52
MCV	86.42	fL	78	- 100
MCH	25.65	pg	27	- 33
MCHC	29.68	g/dL	32	- 36
RDW	14.50	%	11.5	- 14
WBC PARAMETERS				
Total Leucocyte Count	5,200.00	/c.mm.	4000	- 11000
Neutrophils(%)	60.00	%	40	- 70
Lymphocytes(%)	30.00	%	20	- 40
Eosinophils(%)	4.00	%	0	- 5
Monocytes(%)	6.00	%	0	- 6
Basophils(%)	0.00	%	0	- 1
Platelet Count	247.00	th/cmm	150	- 450
Erythrocyte Sedimentation Rate				
E.S.R.	6.00	mm/1hr	0	- 10

TEST REPORT

02 - NS SUPATH

Name	: Mr. Pritambhai Thakur 30022410	Reg. No	: 1120205308
Age/Sex	: 33 Years / Male	Reg. Date Time	: 31-Dec-2021 10:41 AM
Mobile No	:	Coll. Date Time	: 31-Dec-2021 02:15 PM
Ref. By	:	Report Date Time	: 31-Dec-2021 09:21 PM
Client Name	: ADANI HOSPITALS MUNDRA PRIVATE LIMITED @ MUNDRA	Sample Type	: EDTA Whole Blood

Parameter	Result	Unit	Biological Ref. Interval
-----------	--------	------	--------------------------

HEMOGLOBIN A1 C ESTIMATION

Specimen: Blood EDTA

Hb A1C High Performance Liquid Chromatography (HPLC)	5.4	% of Total Hb	For Screening Normal : < 5.7 % Pre-Diabetes : 5.7 % - 6.4 % Diabetes : 6.5 % or Higher
Mean Blood Glucose Calculated	108.28	mg/dL	

Degree of Glucose Control Normal Range:

Poor Control >7.0 %

Good Control 6.0 - 7.0 %

- * High risk of developing long term complication such as retinopathy, nephropathy, neuropathy, cardiopathy, etc.
- * Some danger of hypoglycemic reaction in Type I diabetics.
- * Some glucose intolerant individuals and "subclinical" diabetics may demonstrate HbA1c levels in this area.

EXPLANATION :-

- * Total haemoglobin A1 c is continuously synthesised in the red blood cell through its 120 days life span. The concentration of HbA1c in the cell reflects the average blood glucose concentration it encounters.
- * The level of HbA1c increases proportionately in patients with uncontrolled diabetes. It reflects the average blood glucose concentration over an extended time period and remains unaffected by short-term fluctuations in blood glucose levels.
- * The measurement of HbA1c can serve as a convenient test for evaluating the adequacy of diabetic control and in preventing various diabetic complications. Because the average half life of a red blood cell is sixty days, HbA1c has been accepted as a measurement which reflects the mean daily blood glucose concentration, better than fasting blood glucose determination, and the degree of carbohydrate imbalance over the preceding two months.
- * It may also provide a better index of control of the diabetic patient without resorting to glucose loading procedures.

HbA1c assay Interferences:

- * Erroneous values might be obtained from samples with abnormally elevated quantities of other Haemoglobins as a result of either their simultaneous elution with HbA1c(HbF) or differences in their glycation from that of HbA(HbS)
