### **Careers Objectives:**

Looking for a bright future in the field of software testing with the objective to learn and grow as a professional by leveraging my testing knowledge in real time projects and moving ahead with industry trends. I got a chance to work with an MNC and enhanced my skills and with those, I also learned many things related to software as well as management skills. My main area of expertise has been the project delivery of various sizes. My current role is Quality Analyst.

### **Roles and Responsibilities:**

- System requirement gathering and Analysis.
- Functional testing on each and every component of an application.
- Client Management – Coordination.
- Detecting bugs & classifying them based on priority.
- Test Cases Document, Test Writing, Review, Approval and Execution Process.
- Central Support – Onsite team Management.
- Analyze and write detailed specifications and test requirements using test director.
- Effective coordination between the development team and testing team. Domain expertise in health care, insurance, e-commerce etc.
- Exposure to key functions like manual testing, database testing, android testing & co-ordination.
- Experience is creating test scenarios, test cases, requirement and defect reports etc.
- Tracking and reporting the project status to the client as well as senior management periodically during all the phases of the project, through various reports.
- Good exposure to functional and system testing.
