RESEARCH PROJECT

Title: Microbial biotransformation of andrographolide to generate chemically diverse bioactive scaffolds with antidiabetic activity.

Description: Biotransformation is the modification of a specific compound to a distinct product with structural similarity, by the use of biological catalysts like fungi. Microorganisms are capable of producing a great variety of enzymes in a short period of time as a result of a high rate of cell multiplication. In this sense, a number of compounds of various biological interests can be obtained by microorganisms-driven transformations of natural products.
