Project Experience

IoT Based Water Scarcity Management Device:

Aim of this project is to maintain the water supplied by government to the households and industries. This project becomes cost effective by using fewer components with higher reliability to deliver water according to customer's specification.

RFID Based Smart Toll-Tax System:

Aim of this project is to simplify the procedure of payment at a toll tax. It works on RFID tag which can store the information located at the server of a toll-tax. We can expand this project to surveillance based traffic management.
