PROJECTS

Pavement Surface Unevenness Evaluation

Even if a road is constructed with high quality pavers, it is possible to develop unevenness due to pavement failures. Unevenness index is a measure of unevenness which is cumulative measure of vertical undulations of the pavement surface.

Position of Shear Wall in Multi story Building

The lateral forces that act on any building can do harm if the position of shear wall is not provided properly. Generally the position of shear wall in buildings is at the centroid of that building. Materials like concrete, steel, etc. The wall surrounding lifts of any buildings are generally the best practical position of providing shear wall and is generally in practice now a days.
